

Project Summary & Status Report

Holland Street East & West Reconstruction

Description (location, scope & need)

This project includes the design and reconstruction of Holland Street East and Holland Street West, including rehabilitation of the pavement structure where required, replacement of sanitary and storm sewers where required, and new watermain west of Barrie Street. The project will also incorporate certain principles from the Town of Bradford Downtown Revitalization Strategy, which may include sidewalk replacement, improved streetlighting and lane/traffic signal configurations.

Project Status & Update (schedule, progress and outlook)

The project is expected to commence conceptual design in 2012. Detailed design will likely begin immediately thereafter. The start of construction is dependent on the outcome of the conceptual design stage, but is expected to occur in two phases - phase one from Barrie Street to Dissette Street, and phase two from Barrie Street to Professor Day Drive.
